

Introduction

The Magpul Enhanced Trigger Guard is a drop in replacement for the current issue OEM trigger guard. It incorporates a non folding design with greater access for the trigger finger when using gloves.

Non Folding Design

By building the trigger guard as a non folding version we not only simplified the users operation but also reduced the chances of accidental discharge that is common with the OEM folding design.

No Annoying Rear Gap

By eliminating the folding design we have been able to fill the annoying gap that rubs the top middle finger when using the OEM trigger guard.

Contoured Design

Edges of the Enhanced Trigger guard are rounded and the shape is a subtle “v” that blends in with the current design.

How to install the Enhanced Trigger Guard

- 1. Make sure Firearm is unloaded.**
Remove original OEM trigger guard per accepted armory guidelines.

- 2. Place enhanced trigger guard into place and check fit.**

- 3. While supporting the underside receiver tab, carefully drive in rear roll pin using accepted armory guidelines.**

- 4. Using a 1/16 Allen hex head slowly tighten the set screw until it is flush with the receiver tab.**

The Magpul Enhanced Trigger Guard is a drop in replacement for the M16 / AR15 weapons platform.

The Enhanced Trigger Guard features a shallow "V" shape for better use of gloves in tactical shooting or winter operations.

The Trigger Guard is non-folding and has rounded edges and fills in the annoying "gap" at the rear of the trigger guard.
